

Report to Kingmoor PC (19/11/20) re: Incinerator Task Force

The executive summary in the document “Ricardo Final Report” deals with issues of concern which are still outstanding and need to be ratified before permission is granted for the incinerator. They are mainly to do with air pollution and the effect on water quality in the River Eden, both its measurement and the amount. I have contacted the angling association who are aware of the issues and have been in contact with the EA.

The final date for submission of comments is currently 30/11/2020 which means that the council will have to submit its comments via email after the meeting. I suggest we express our concerns similar to those in the executive summary (previously circulated via the Clerk by email).

All is not completely lost, however, since residents should have received a document from the EA allowing them to submit comments directly to the EA. If any councillor wishes to comment they could do so in a personal capacity prior to the meeting

Anything further information councillors could contact me directly.
